

Lazy Assets

A web3 De-Fi project which turns your idle assets into generational wealth.

Problem Statement

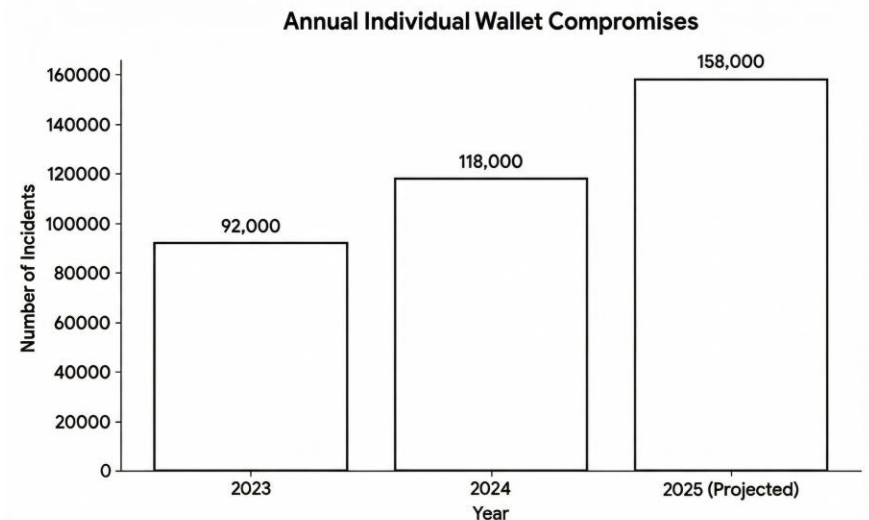

Managing digital assets can be very hectic.

Reports show that millions are wasted due to improper management of crypto wallets.

Even if you manage to get your assets, your capital sits idle for months, even years!!

20%

of BTC is lost in similar incidents.

Solution

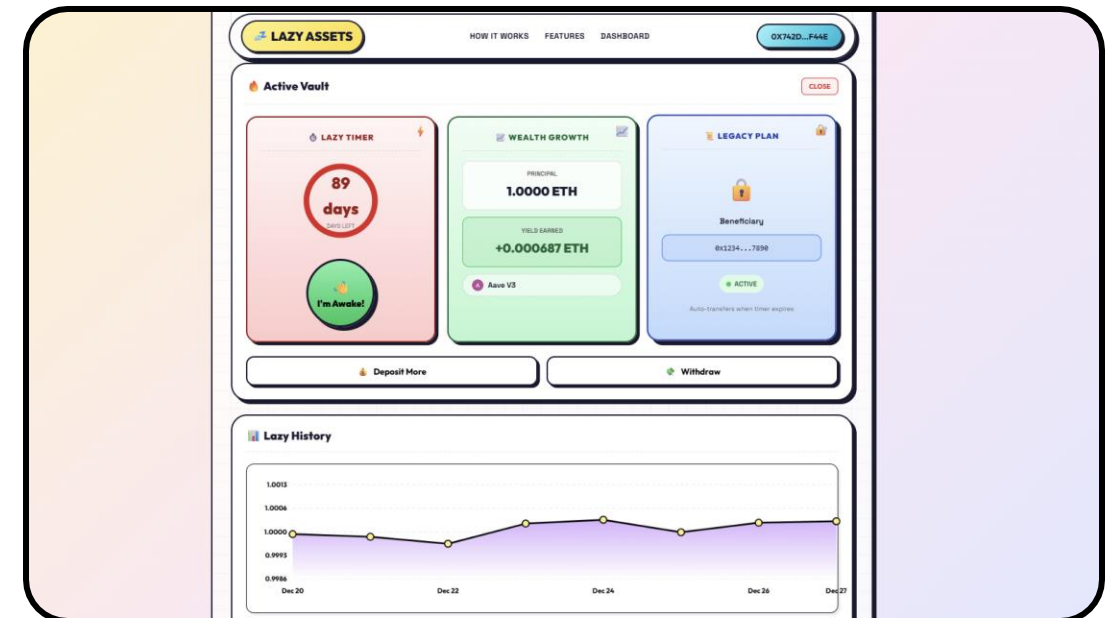

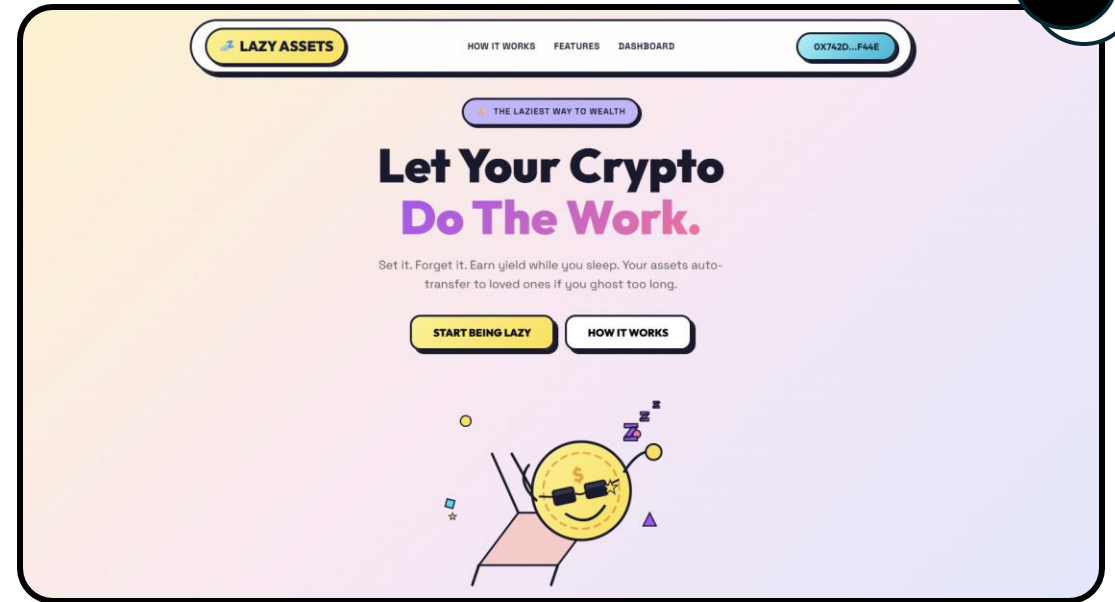

If you have lost access to your crypto wallet, Lazy Assets saves the day.

Check in daily, if no transactions or actions have taken place within a 3 months or 6 months time period by you, then all your assets get transferred to a beneficiary wallet as set by you.

You lost your wallet for 3 months?? Heavy loses?

Nope, Lazy Assets is going to invest your money compound it and give out the total and principal amount directly to your new wallet

Workflow

4

User Deposits ETH (MetaMask + Ethers.js)

Vault Created

Auto-Deposit to DeFi

Aave v3 (auto-investments)

Liquidity Pool APY

Pings User
(checks availability)

no

Funds Transferred
(Beneficiary Wallet)

yes

reset timer

Tech Stack:

1. Vanilla JS
2. Ethers.js
3. MetaMask
4. APIs

Target Users and Stakeholders

- Passive/ Long-term Crypto Investors: Individuals who often invest sitting idle for years without generating returns.
- Users looking for a Legacy Plan to ensure their digital assets are not lost upon death.
- Users concerned about losing access to their wallets due to improper management.

Thank you
